EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Peter N. Lalos on March 20, 2007.

The application has been amended as follows:

Canceled claims 3 and 28-39.

In claim 1, in line 7 after "mounted on said bolt" inserted -- , and each including a washer insert molded in said inner grommet and engageable with said upset portion of said bolt when said inner grommet is mounted on said bolt--.

In claim 4, in line 1 after "according to claim" deleted "3" and replaced with --1--.

In claim 20, in line 9 after "received in said groove" inserted --and engageable with said washer--.

In claim 54, in line 8 after "mounted on said bolt" inserted -- , and including a washer insert molded in said inner grommet and engageable with said upset portion of said bolt when said inner grommet is mounted on said bolt--.

2. The following is an examiner's statement of reasons for allowance:

Art Unit: 3679

As to claims 1 and 54, Hardy, Jr. et al. (US 4,944,523) disclose the claimed link with the exception of comprising an inner grommet having a portion thereof functional to snap-fit on the upset portion of the bolt when the inner grommet is mounted on the bolt, and including a washer insert molded in the inner grommet and engageable with the upset portion of the bolt when the inner grommet is mounted on the bolt.

As to claim 20, Hardy, Jr. et al. disclose the claimed link with the exception of comprising a pair of inner grommets having a washer insert molded therein, a bore through the body thereof and the washer and a groove in the bore permitting the inner grommet to be snap-fit onto an upset portion of the bolt with the upset portion being received in the groove and engageable with the washer when the inner grommet is mounted on the bolt with the bolt extending through the bore; and a pair of outer grommets having a washer inset molded therein, a bore through the body thereof and the washer and a groove in the bore permitting the outer grommet to be snap-fit onto a flanged portion of one of the nuts.

There is no teaching or suggestion, absent the applicant's own disclosure, for one having ordinary skill in the art at the time the invention was made to modify the link disclosed by Hardy, Jr. et al. to have the above mentioned elemental features.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to the applicant's disclosure. The following patents show the state of the art with respect to grommets:

Fischer (US 2,824,663) and Triplett (US 4,686,808) are cited for pertaining to grommets comprising a body formed of a resilient material having a bore having an annular groove, and a rigid washer insert molded in the body disposed adjacent the groove.
